1. This action is in response to the RCE filed on 3/19/09.

2. Reasons for Allowance

Claims 2-33 are allowable.

With regards to claim 16, the examiner cannot find any applicable prior art and suggestions disclosing processor means coupled to the means for receiving and being operable to examine metadata in received messages and parameters in a set of stored rules related to the request category to determine in which of said plurality of storage devices the associated image should be stored when the set of stored rules is related to the stored category and means for storing the associated image data in the storage device determined by the processor means in combination with the rest of the limitations of claim 16.

With regards to claims 24 and 33 see the rationale for claim 16.

3. Relevant art

Hisano (US pat no 5,165,011): Hisano discloses a system for switching one out of a plurality of rule groups to an inference device which operates on applied input data using the selected rule group. A starting rule group decision unit receives the input data and decides on a starting rule group to be used by the inference device on the received input data. During operation, the selecting unit may designate another rule group to be activated for use by the inference device. The plurality of rule groups are preferably

associated with respective rule group processors each having a plurality of rule evaluation units, the starting rule group decision unit decides on one of the rule group processors used in the inference device, and the selecting unit includes a plurality of switching gates respectively assigned to the rule group processors so that a rule group processor is selected for use by activating its assigned switching gates (figure 1, R1 to RN is where the rules are stored).

2. Migita (US pub no 2002/0013915): Migita discloses a data storage array system comprising a plurality of data storage devices and a controller for controlling the data storage devices, wherein the controller receives data access instructions from an external device to the plurality of data storage devices, converts the data access instructions into internal access instructions in accordance with a prescribed algorithm and manages them as internal access instruction groups, and executes data access by issuing the internal access instruction groups to the plurality of data storage devices, the controller including a means of generating redundant data in a redundant group corresponding to write data in accordance with an externally issued write instruction and for storing the write data and redundant data on the plurality of data storage devices, and means of externally supplying readout data by restoring data as far as possible from successfully readout data and redundant data when a timeout has occurred or data reading has failed on one or more of the plurality of data storage devices during data reading in accordance with an externally issued read instruction, and wherein when the number of internal access instruction groups the executions of which have

been started but not yet completed on the plurality of data storage devices, or for any one of which a timeout has not occurred, is designated as the number of groups being executed, the controller permits the issuing of the internal access instruction groups until the number of groups being executed reaches a predetermined number and, once the number of groups being executed has reached the predetermined number, the controller holds off issuing new internal access instruction groups to the plurality of data storage devices until the number of groups being executed becomes zero (figure 10 and paragraph 286). The following teachings from Migita read a plurality of storage devices, where at least one of the storage devices; means connected to receive the messages and a request message, wherein the request message includes a storage request category.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
